	FORMALDEHYDE		E1
	BIOLOGICAL ATTACK		
	MOTH / INSECT RESISTANT		Eulan Treated
	ANTI STATIC		0.3kv (Requirement less than +2.0kv)

General Information

INSTALLATION - In all contract locations an 'all-over' stick down method is recommended to BS 5325 (1983). If underlay is required it should be of a firm and unyielding type and where installed in larger contract areas the carpet should be power stretched. For quantity orders requiring colour matching, please state at time of ordering.

MAINTENANCE - To maintain your carpet's appearance it is recommended that it is vacuumed at least three times per week, to remove particles of dirt and dust. Loop pile carpets can be vacuumed with cylinder vacuum cleaners using the suction attachment only. On upright vacuum cleaners lift the beater bar brush to avoid pile surface abrasion. Please note, over time, regular foot traffic will flatten the pile surface in the main walkways, causing areas of differential wear.

These areas will appear lighter or shaded in comparison to the less frequently used parts. This shading / tracking or flattening happens to all carpets with a pile surface and as such is not accepted as the basis for any complaint. Occasionally wool may contain traces of the sheep's natural environment. These traces can be easily removed and do not effect the durability of the carpet. Joins in loop pile carpet can sometimes be visible, especially so in patterned loop pile. The use of seaming cement is advisable.

MATCHING - This sample may not be from the same production batch as current stock and therefore should be used as a guide and not as an exact match. Equally matching between 5 metre and 4 metre widths cannot be guaranteed.

IMPORTANT - Minimum order length is 1.5 metres.
